TRAINING GUIDELINES

Rest between sets

Rest 2–3 minutes after demanding compound lifts and around 60–90 seconds for most isolation exercises and core work. Adjust as needed.

Warm-up

Start with 5–10 minutes of easy cardio and perform movement-specific warm-up sets before heavy lifts.

Progressive overload

When all prescribed reps can be completed with good form, increase the load gradually rather than sacrificing technique.

Beginner adjustment

Beginners may start with 2 working sets per exercise and build volume gradually as technique and recovery improve.

Recovery

Take rest or active-recovery days as needed. Avoid training through sharp pain, and seek qualified guidance for injuries or medical limitations.

Personalisation

These are example plans, not medical advice. Adjust exercises and volume for training experience, goals, equipment and individual needs.
